

**DOBER**

**MICROCRYSTALLINE FERTIGANTS**  
*SPECIAL LINE*

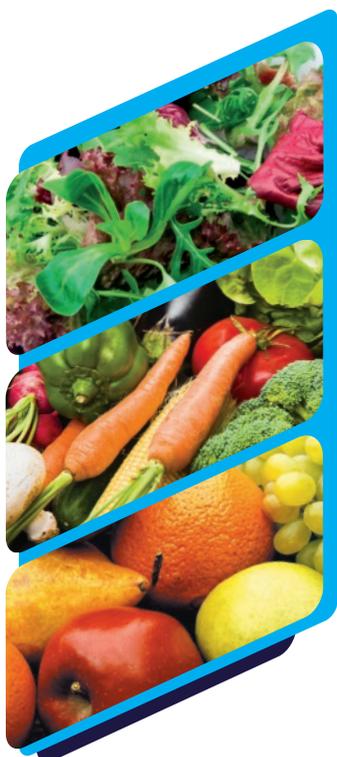

**STRENGTHS**

- TOTAL AND IMMEDIATE SOLUBILITY
- SUPPLEMENTED WITH MICRO-NUTRIENTS IN CHELATED FORM
- FREE OF PHYTOTOXIC IMPURITIES
- SUITABLE FOR ALL NUTRITIONAL NEEDS

**PACKAGE**

25 kg bags  
DOBER 20.20.20 - 10 Kg bags  
DOBER 15.5.30 + 2 - 10 kg bags  
DOBER 10.50.7 + Micro - 10 Kg bags  
Pallet: 1500 Kg

**FEATURES**

**DOBER** is a range of microcrystalline fertigants, made from high quality raw materials and formulated in different concentrations, which retain their initial physical characteristics over time.

**DOBERS** are free of impurities such as sodium, chlorides, carbonates, biuret and are characterised by complete and immediate solubility, so they can be used without difficulty in fertigation systems for open field crops as well as in more sophisticated fertigation/nebulisation systems in greenhouses and for potted crops.

They are enriched with EDTA chelated microelements, so they help prevent micro deficiencies and promote harmonious crop development.

**DOSES AND METHODS OF USE**

**FERTIGATION**

0.5-1.5 kg/1000 m<sup>2</sup> per day. For non-daily fertigation, the application rate must be increased in proportion to the number of days between applications (e.g. 3-5 Kg/1000 m<sup>2</sup> for fertigation every 7 days).
