

DOBER

SEAWEED

MICROCRYSTALLINE FERTIGANTS WITH SOLUBLE ALGAE EXTRACTS AND MICROELEMENTS COMPLEXED WITH LS

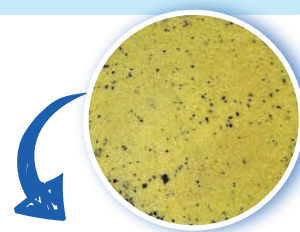

STRENGTHS

- Soluble seaweed and LS-complexed microelements activate physiological processes and enhance plant response in a single solution
- They combine mineral nutrition with biostimulation, improving nutrient uptake and helping to increase crop yield and quality
- Produced from high-quality raw materials, free from impurities such as sodium, chlorides, carbonates, and biuret
- Easy to use; suitable for open-field fertigation as well as advanced greenhouse systems, misting, and container-grown crops

PACKAGE

25 kg bags

Water-soluble crystals

FEATURES

DOBER SEAWEED is a line of fully water-soluble microcrystalline fertilizers, designed for fertigation applications and formulated with high-quality organic and mineral raw materials.

Unlike traditional **NPK fertilizers**, the nutritional base is enhanced with soluble brown seaweed extracts and micronutrients complexed with lignosulfonates (LS).

is a line of fully water-soluble microcrystalline fertilizers, designed for fertigation applications and formulated with high-quality organic and mineral raw materials.

Unlike traditional NPK fertilizers, the nutritional base is enhanced with soluble brown seaweed extracts and micronutrients complexed with lignosulfonates (LS).

DOSES AND METHODS OF USE

FERTIGATION

0,3-1,0 kg/1000 m² per day.

In case of non-daily fertigation, increase the dosage proportionally based on the interval between applications (e.g., 2-4 kg/1000 m² every 7 days).

Note: Some types of water may cause precipitation even without fertilizers; therefore, special attention is required when using such water.

NUTRITION + BIOSTIMULATION IN ONE SOLUTION
