### FERTI MIX PLUS and FERTI MIX - HIDRO FEATURES

**FERTI MIX PLUS** is a systemic product with a high concentration of **chelated microelements** in a well-balanced ratio according to the specific needs of greenhouse horticultural crops, fruit, flower and industrial open field.

This product is especially designed for use in all crops where there is a need to prevent and treat apparent or suspected deficiencies of one or more micro-nutrients.

**FERTI MIX PLUS** is enriched with **Magnesium (5.0%)**, making it ideal for preventing and treating typical deficiencies with the intake of this important element.

**FERTI MIX - HIDRO** is a mixture of micro-nutrients in chelated form specifically designed for use in both **HYDROPONIC** and conventional crops. The micro-nutrients contained are well balanced with each other and in specific ratios that take into account the consumption of the main horticultural and floricultural crops.

**FERTI MIX PLUS** and **FERTI MIX - HIDRO** are an excellent choice for achieving high yields in both protected areas and open fields.
